

**ROTANODE
E7876X****Rotating Anode X-Ray Tube Assembly**

- ◆ Rotating anode X-ray tube assembly for high energy radiographic and cine-fluoroscopic operations.
- ◆ The heavy anode is constructed with specially processed rhenium-tungsten faced molybdenum target which is 74 mm diameter and has an improved coating to increase thermal emissivity.
- ◆ This tube has foci 1.2 and 0.6, and is available for a maximum tube voltage 150 kV.
- ◆ Accommodated with IEC60526 type high-voltage cable receptacles.

**General Data****IEC Classification** Class I**Electrical:**

Circuit:

High Voltage Generator	Constant potential high-voltage generator
Grounding	Center-grounded

Nominal Tube Voltage:

Radiographic	Maximum 40 ~ 150 kV
Fluoroscopic	Maximum 50 ~ 125 kV

Nominal Focal Spot Value:

Large Focus	1.2
Small Focus	0.6

Nominal Anode Input Energy (at 0.1s):

	50 Hz	60 Hz
Large Focus	50 kW	54 kW
Small Focus	20 kW	22 kW

Motor Ratings Stator: XS-R

Duty	Starting	Running
Power source (Hz)	50/60	50/60
Input power (W)	1450	80
Voltage ¹⁾ (V)	240	58
Current (A)	6.5	1.5
Min. Speed up ²⁾ (s)	0.6	-
Capacitor (μF)	24	24

Note 1) The every applied voltage must be never exceeded 110% of the above specification.

2) The speed-up time is allowed up to 110% of the above specification.

Anode Rotation Speed:

50 Hz	Minimum 2700 min ⁻¹
60 Hz	Minimum 3200 min ⁻¹

Stator impedance:

Common-Main Winding	27.5 Ω
Common-Auxiliary Winding	58.0 Ω

Resistance between Housing and Low Voltage Terminals

Minimum 2 MΩ

Normal operating range of the housing temperature

16 ~ 75 °C

Mechanical:

Dimensions	See dimensional outline
Overall Length	479 mm
Maximum Diameter	152.4 mm

Target:

Angle	12 degrees
Diameter	74 mm
Construction	Rhenium-Tungsten faced Molybdenum

Permanent Filtration

1.3 mm Al / 75 kV IEC60522 / 1999

Radiation Protection (To meet the requirements of IEC60601-1-3):

Leakage Technique Factor

150 kV, 3.4 mA

X-ray Coverage

354 × 354 mm at SID 835 mm

Weight (Approx.)

16 kg

High Voltage Receptacle

To meet requirements of IEC60526

Cooling Method

Natural or forced air

Housing (Including both end plates):

Model Number

XH-121

Absolute Maximum and Minimum Ratings (At any time, these values must not be exceeded.)

Nominal X-ray Tube Voltage:

Radiographic	150 kV
Fluoroscopic	125 kV

Maximum Voltage to Ground

Minimum Tube Voltage

Maximum X-ray Tube Current:

Large Focus	700 mA
Small Focus	300 mA

Maximum Filament Current:

Large Focus	5.4 A
Small Focus	5.2 A

Filament Voltage:

Large Focus (At maximum filament current 5.4 A)	11.9 ~ 16.1 V
Small Focus (At maximum filament current 5.2 A)	6.8 ~ 9.2 V

Filament Frequency Limits

X-ray Tube Assembly Input Power

(Repeated radiographic exposure)

Thermal Characteristics:

Anode Heat Content	163 kJ (230 kHU)
Maximum Anode Heat Dissipation	750 W (1056 HU/s)

X-ray Tube Assembly Heat Content

Maximum Continuous Heat Dissipation:

Without Air-circulator

Environmental Limits

Operating Limits:

Temperature	10 ~ 40 °C
Humidity	30 ~ 85 % (No condensation)

Atmospheric Pressure 70 ~ 106 kPa

Shipping and Storage Limits:

Temperature	-20 ~ 70 °C
Humidity	20 ~ 90 % (No condensation)

Atmospheric Pressure 50 ~ 106 kPa

Warning

Warning to Interface with X-ray Generator

1. Housing Rupture

Never input over-rated power to x-ray tube assembly.

If the input power is extremely higher than specification, it may cause the over temperature of anode, insert tube glass shatter and ultimately the following serious problems due to generating over-pressure by oil vaporization inside housing assembly.

In such a critical condition, the safety thermal switch can not protect x-ray tube even if it works.

- * Housing sealing parts rupture
- * Human injury including burns due to hot oil escape
- * Fire accident due to flaming anode target

We strongly request that the x-ray generator should have a protective function which manages input power to x-ray tube assembly.

Cautions

Caution to Interface with X-ray Generator

1. Over Rating

X-ray tube assembly can be broken with applying just one over rated shot.
Please read the technical data sheets carefully and follow the instructions.

2. Permanent Filtration

The total filtration and the distance between x-ray focal spot and human body are regulated legally.
They should be complied with the regulation.

3. Safety Thermal Switch

X-ray tube assembly has safety thermal switch to prohibit further input power when the tube housing reaches to the temperature of switch-open.

The switch should be hooked up with the x-ray generator which control output power to x-ray tube assembly.

The switch is not recommended connecting stator coil in series circuit.

Even if the switch works, never turn the system power off and the cooling unit should be activated.

4. Unexpected Malfunction

X-ray tube assembly may have the risk to be unexpectedly malfunctioning due to life termination or failure. If the serious problems caused by the above risk is expected, we recommend to have a contingency plan to avoid such a case.

5. New Application

If you use the product with new application not to be mentioned in this specification or with different type of x-ray generator, please contact to us for confirming its availability.

Caution for Installation, Adjustment and Maintenance

1. Qualified Persons

Only qualified persons who have technical training and professional knowledge can handle x-ray tube assembly.

2. Fragile Glass

X-ray tube is assembled with glass, therefore, it can be broken with the mechanical vibration or pulsed shock over 19.6m/s^2 (2G).

Careful handling is required to treat or transport.

3. Ground Terminal

X-ray tube assembly has ground terminal. Ground cable should be connected.

4. High Voltage

All x-ray tubes operate at voltages high enough to kill through electrical shock. Never touch the high voltage delivered plugs or terminals.

When direct access to such parts is required, the primary circuit should be disabled and high voltage capacitors/cables discharged.

5. High Voltage Plug

High voltage plug should be cleaned up and free from any physical damages. Silicon compound application is required for high voltage stability.

6. Operation Atmosphere

X-ray tube assembly is not allowed to use in the atmosphere of flammable or corrosive gas.

7. Protective Cover

X-ray tube assembly is not allowed to use without the protective cover attached.

8. Handling

Appropriate jig or tools are required for tube installation to avoid physical damages.

9. Returning Tube

X-ray tube assembly should be repackaged with the original material when it is returned back for quality examination in our factory.

Be careful to put the tube upside cathode. If the packaging is not proper, the tube may not be correctly examined.

Caution in Operation

1. X-Ray Radiation

X-ray tube assembly should have the beam limiting equipment mounted on the x-ray port to protect unnecessary radiation.

2. Dielectric Oil

X-ray tube assembly has dielectric oil contained for high voltage stability. As it is poisonous for human health, if it is exposed to the non-restricted area, it should be disposed as following to the local regulation.

3. Operation Atmosphere

X-ray tube assembly is not allowed to use in the atmosphere of flammable or corrosive gas.

4. Disposal

X-ray tube housing is lined with lead to protect unnecessary radiation.

The lead powder or vapor is harmful for human health.

Dispose the scrapped products according to the requirement of local regulation.

If you have any questions, please contact to our local sales representatives for further information.

5. X-Ray Tube Housing Temperature

Do not touch on X-ray tube housing surface just after operation due to high temperature.

Stay X-ray tube to be cooled.

6. Any Malfunction

TETD immediately, if any malfunction of the X-ray tube assembly is noticed.

Caution Label

- (a) This label is a caution label to notify the user of the following point.
"Housing end cap is used to protect the electric shock and x-ray leakage."

Attachment position : X-ray tube assembly housing end cap

Decreasing input power rating

Serial Load puts a severe thermal stress on the X-ray tube due to the large number of exposures made in rapid succession. Intervals between exposures are fixed and so short that it is not possible for the anode track to cool to any extent during the exposure series.

Therefore, the temperature of the anode track increases from exposure to exposure.

The kW values used in the Serial load at each thermal status of anode have been determined to prevent damage to the anode as follows:

Table1. Radiographic Rating

% HU	kW at 0.1s exposure for 1.2 Nominal Focal Spot Value		kW at 0.1s exposure for 0.6 Nominal Focal Spot Value	
	60Hz	50Hz	60Hz	50Hz
0-5	54.0	50.0	22.0	20.0
6-10	50.0	46.0	20.0	18.3
11-15	50.0	46.0	16.4	15.0
16-20	46.5	42.5	16.4	15.0
21-30	46.5	42.5	16.4	15.0
31-40	34.0	31.0	14.4	13.1
41-50	32.4	29.6	13.7	12.5
51-60	3.8	28.1	13.0	11.9
61-70	29.2	26.7	12.4	11.3
71-80	27.6	25.2	11.7	10.7
81-90	26.0	23.7	11.0	10.0

Table2. Radiographic and fluoroscopic Rating

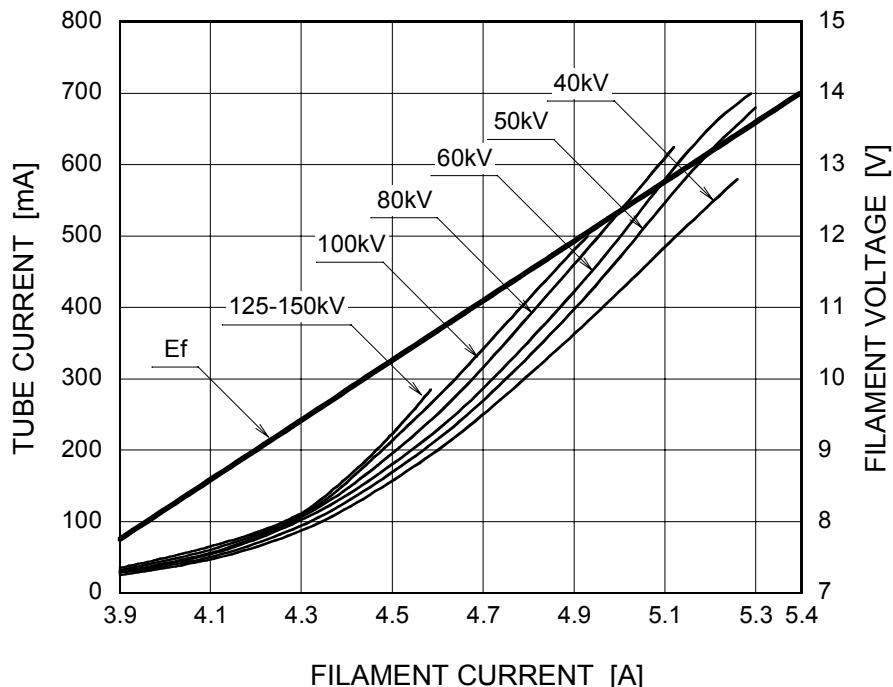

% HU	kW at 0.1s exposure for 1.2 Nominal Focal Spot Value		kW at 0.1s exposure for 0.6 Nominal Focal Spot Value	
	60Hz	50Hz	60Hz	50Hz
0-10	35.0	32.0	13.0	11.9
11-20	35.0	32.0	13.0	11.9
21-30	35.0	32.0	13.0	11.9
31-40	35.0	32.0	13.0	11.9
41-50	35.0	32.0	13.0	11.9
51-60	35.0	32.0	13.0	11.9
61-70	29.2	26.7	12.4	11.3
71-80	27.6	25.2	11.7	10.7
81-90	26.0	23.7	11.0	10.0

Note: The % HU is the ratio of anode storage heat amount per the nominal anode heat storage capacity (230kHU).
